

Madeira embroidery file for non-medical face masks

Embroidafabrik offers a free embroidery file for face masks for download on our website. This makes it very easy to produce masks for personal and non-medical use on domestic or industrial embroidery machines. The finished Madeira masks measure 240 x 140 mm and are washed at 60 °C (or 40 °C if necessary, with the use of a disinfectant). The care and instructions for both backings and linings should be taken into account. They do not protect against infection with coronavirus. If you want to use these designs for medical or certified masks, you should discuss the material requirements with the respective customer.
